PONNANNA C V

SITE RELIABILITY ENGINEER | CLOUD INFRASTRUCTURE

Coorg, Karnataka, India• +918123762045 • chonira10@gmail.com

SUMMARY

Site Reliability Engineer with **6.5+ years of experience operating large-scale, multi-region SaaS platforms** across AWS, IBM Cloud, Azure, and GCP.

Expert in **production reliability, Kubernetes platforms, distributed system troubleshooting, automation frameworks, identity systems (OAuth2/OIDC), and infrastructure as code.**

Demonstrated ability to reduce MTTR, scale globally distributed services, and automate operational toil while maintaining strict SLA/SLO adherence for enterprise-grade SaaS environments serving 200+ clients.

CORE EXPERTISE

- Production Engineering & Incident Command
- SLA/SLO Design & Error Budget Thinking
- Multi-Region SaaS Architecture
- Kubernetes & OpenShift Platform Engineering
- Infrastructure as Code (Terraform, Ansible)
- CI/CD & GitOps (ArgoCD, Azure DevOps, Secure pipeline Service)
- Observability & Alerting Strategy
- Distributed Authentication Systems (OAuth2, OIDC, SSO)
- Linux Systems & Networking (TCP/IP, DNS, NAT)
- Database Reliability (DB2, Backup/Recovery)

CERTIFICATIONS

- Google Cloud Certified – Associate Cloud Engineer
- IBM Certified Professional SRE – Cloud

WORK EXPERIENCE

IBM – Site Reliability Engineer (Cloud SaaS Platform)

Global SaaS Expansion & Reliability Engineering

- Led end-to-end production region expansion across 4 cloud regions (AWS & IBM Cloud), designing networking, identity, storage, and monitoring architecture to support 200+ enterprise SaaS tenants
- Recognized by global leadership for successful multi-region rollout.
- Automated PR-triggered builds, merge pipelines, and continuous deployment to IBM Code Engine using DevSecOps best practices, reducing manual release effort and improving deployment consistency and release reliability.

Automation & Toil Reduction

- Built Ansible-based service restoration framework automating such as RP service recovery after host migration and SSO reconfiguration during restore workflows
- Eliminated manual intervention in restore procedures, significantly reducing MTTR.
- Automated Cognos audit database configurations via reusable Ansible playbooks.
- Designed centralized log collection service using Ansible + Node.js microservices, standardizing logs across all production servers.
- Migrated embedded secrets to structured secret groups, reducing security exposure and improving compliance posture.

Production Incident Ownership

- Acted as primary responder in on-call rotations supporting 200+ enterprise Financial SaaS clients.
- Resolved critical OAuth2/OIDC SSO failures across multiple production environments.
- Identified root cause of instance provisioning failure and resolved product upgrade failure in openshift SaaS platforms
- Conducted integration troubleshooting between OpenPages and WGov systems.
- Authored standardized internal documentation for OAuth 2 & third-party identity integrations.

Observability & Reliability Improvements

- Implemented log-based detection alerts, enabling proactive remediation before customer impact.
- Configured Instana monitoring, Grafana alerting with custom alert thresholds for application and infrastructure health in openshift environment.
- Worked on end-to-end OpenShift cluster lifecycle management, including version upgrades, patching, and SaaS product promotions, reducing upgrade-related incidents through automation, pre/post health checks, and controlled rollout strategies.
- Led migration of CI/CD pipelines from Travis CI to IBM Secure Pipeline Service (DevSecOps), redesigning build stages and deployment workflows, reducing deployment time from 50 minutes to 8 minutes

Wipro Limited – Senior Cloud Engineer (Multi-Cloud Platforms)

High-Availability & Platform Engineering

- Designed multi-region Azure and GCP deployments delivering 99.99% availability.
- Led hybrid cloud connectivity using VPN, Interconnect, and ExpressRoute.
- Reduced on-prem infrastructure footprint by 75% via cloud migration strategy.

Kubernetes & Distributed Workloads

- Built and operated GKE and AKS clusters across hybrid environments.
- Implemented autoscaling, load balancing, and container orchestration for microservices workloads.
- Deployed Cloud Run services enabling rapid horizontal scalability.

Infrastructure as Code & CI/CD

- Automated infrastructure provisioning using Terraform and Ansible.
- Streamlined CI/CD pipelines using Azure DevOps.
- Reduced restoration time:
  - 90% via automated Azure backup strategies
  - 95% via automated GCP file store backup scheduling

Security & Governance

- Designed cloud security controls using Prisma Cloud.
- Implemented IAM governance across AWS, Azure, and GCP storage systems.
- Developed cost-optimization scripts removing unused cloud resources.

EDUCATION

M.Tech – Computing Systems & Infrastructure
Birla Institute of Technology & Science (BITS), Pilani

TECHNICAL STACK

- Cloud: AWS, IBM Cloud, Azure, GCP
- Containers: Kubernetes (GKE, AKS, OpenShift), Docker
- IaC: Terraform, Ansible, Helm
- CI/CD: ArgoCD, Azure DevOps, GitHub
- Monitoring: Grafana, Prometheus, Instana, Log-based alerting, Nimsoft
- Databases: DB2, SQL
- OS: Linux (RHEL, Ubuntu, SUSE), Windows Servers
- Networking: TCP/IP, NAT, DNS, VPN, Load Balancers, Istio
- Programming: Shell scripting, Python, Yaml
